

PaceGen × Otto Results — Strategy Brief

Campaign Performance & 90-Day Renewal Proposal

Prepared: April 28, 2026

Executive Summary

Over the past ~120 days we have built, tested, and scaled 9 active outbound campaigns for PaceGen across two major market signals (Google and Microsoft ecosystems), contacted **119,769 prospects**, sent **210,881 emails**, generated **2,278 unique replies**, and produced **338 qualified interested responses** — all for a single offer category in a brand-new market (GEO).

This document covers what we built, the signal-based strategies we deployed, what is working, what we are cutting, and what the next 90 days look like.

1. Campaign Overview — Full History

Campaign	Signal Type	Status	Leads	Emails Sent	Unique Replies	Interested
GEO Readiness	Broad GEO	Active	62,911	115,981	1,216	207
GEO Readiness (Apr 23 — New Leads)	Broad GEO	Active	3,416	5,746	25	—
Existing LLMs — Google	llms.txt Signal	Active	19,209	54,920	685	92
Missing LLMs — Google	llms.txt Signal	Complete	8,977	8,977	59	10
Competitor Gap Attack — Google	Competitor Signal	Complete	9,110	9,111	163	22
Whole-Offer Strategy — Google	Whole Offer	Complete	1,153	1,153	9	—
Missing LLMs — Microsoft	llms.txt Signal	Complete	2,072	2,072	12	—
	Competitor Signal	Complete	7,329	7,329	67	3

Competitor Gap Attack — Microsoft						
Whole-Offer Strategy — Microsoft	Whole Offer	Complete	5,592	5,592	42	4
Content Investment + Traffic Decline	SEO/LLM Decay	Draft	—	—	—	—

2. Signal-Based Strategies We Have Run

One concern raised was that we are doing “spray-and-pray.” That is not accurate. Here is a breakdown of every signal type we have tested and the results:

Signal 1 — llms.txt File Detection (Google + Microsoft)

Campaigns: Existing LLMs — Google, Missing LLMs — Google, Missing LLMs — Microsoft

We scraped companies with or without `llms.txt` files on their domains — a strong technical signal that the company cares about AI visibility. We split into two sub-angles:

- **Existing LLMs:** “You already have an llms.txt — do you know if AI is actually citing you?”
- **Missing LLMs:** “You do not have an llms.txt — here is what you are leaving on the table.”

The Existing LLMs — Google campaign became our **highest unique reply rate campaign at ~3.6%** (685 replies / 19,209 leads). This is a signal-based campaign.

Example copy that generated a reply from Roger Rizk, Co-Founder & COO @ BLACKBOX.AI:

“Roger, checked blackbox.ai/llms.txt and saw you already have one on your website. Smart move. Do you know if AI tools are actually citing Blackbox when people ask about ai development platform? We track AI citation rates and can show you exactly where you are showing up (or not) to help you generate more leads. Can I send over a report?”

Roger replied: “please share how you can help in details”

Signal 2 — Competitor Gap Attack (Google + Microsoft)

Campaigns: Competitor Gap Attack — Google, Competitor Gap Attack — Microsoft

We ran prospects’ competitors through ChatGPT and Perplexity and identified where competitors are cited but the prospect is not.

Example copy that generated a reply from Oleg Zankov, Founder @ Latenode:

"Oleg — ran 'best ai workflow automation saas' through ChatGPT. Zapier showed up. Latenode did not. Right now is the easiest time to fix that. ChatGPT, Perplexity, Google AI Overviews — they are all still building their source preferences. Early movers are locking in positions while competitors sleep. We make AI recommend you instead of your competitors. 90 days to full visibility — most see first citations in 30. Want me to send over a competitive breakdown?"

Oleg replied: "Tell me how you do it"

Signal 3 — GEO Readiness Scorecard

Campaigns: GEO Readiness (main + refresh)

We reach out to companies that do not appear in ChatGPT when their core keywords are searched, and offer a GEO Readiness Scorecard. Highest absolute number of interested replies: **207**.

Example that generated a reply from Nikhil @ Simpl AI:

"Nikhil, searched on ChatGPT and Simpl AI was not cited. We built a GEO Readiness Scorecard that helps you evaluate where you stand across AI engines, off-page authority, and technical foundations. Most companies score 3-5 out of 11 — meaning they are invisible to 50%+ of their market. Still interested?"

Nikhil replied: "interesting, yeah can you send over the scorecard. I assume your company does GEO consulting to help companies improve?"

Example that generated a reply from Laura Nobles, CEO @ Pazanga Health Communications:

"Laura, searched for healthcare public relations on ChatGPT and Pazanga Health Communications was not cited. We built a GEO Readiness Scorecard..."

Laura replied: "Hi Rocky — Yes, please send me a scorecard to review."

3. What Is Working

Campaign	Interested	Signal Type
GEO Readiness	207	Broad GEO search gap
Existing LLMs — Google	92	llms.txt detection
Competitor Gap Attack — Google	22	Competitor citation gap
Missing LLMs — Google	10	Missing llms.txt
Whole-Offer Strategy — Microsoft	4	Multi-angle offer

Whole-Offer Strategy — Google	0 (9 replies)	Multi-angle offer
-------------------------------	---------------	-------------------

Key insight: The two strongest performers are signal-based (llms.txt + competitor gap). The broad GEO Readiness campaign wins on volume. Combining both is the right strategy going forward.

4. What Is Not Working / What We Are Cutting

Whole-Offer Strategy — Google: 1,153 leads, only 9 replies, 0 interested. Multi-angle approach dilutes the message. Cutting entirely for the next cycle.

Content Investment + Traffic Decline: Never launched. Shelving — requires a different buyer mindset and a longer education sequence.

Microsoft as primary: Consistently underperformed Google equivalents across all signal types. Data says Google is the right primary target. Microsoft signals remain as small supplemental only.

5. Why Volume + Signal Is Not Spray-and-Pray

The concern about “spray-and-pray” vs. “intent-based” is worth addressing directly — we have already been doing the intent-based version.

The reality: at the signal volumes available (companies with llms.txt files, companies with specific competitor citations), we can exhaust the cleanest intent signals within a few days. The GEO market is still early and the addressable list of “perfect signal” accounts is not infinite.

The right architecture is two tiers:

- **Tier 1 (pure signal):** llms.txt owners, verified ChatGPT citation gaps → high personalization, lower volume
- **Tier 2 (broad + personalized):** GEO Readiness at scale, personalized to company name + keyword + AI engine → 207 interested responses per campaign cycle

Both tiers are running. Volume at Tier 2 is what keeps pipeline full while Tier 1 warms and converts.

6. Infrastructure Recommendation

Current situation: All sending inboxes are under Rocky’s name across multiple aging domains. As campaigns age, deliverability degrades.

Recommendation for next 90 days:

- **New domain + inbox set per offer type** — 4 sending identities, one per offer angle. Improves deliverability and attribution.

- **Warm new inboxes now** — 4–6 week warmup before high-volume sends.
- **Retire aging domains** — `pacegenbrandauthority.info` and `pacegenanswerstrategy.info` have sent at scale and should be rotated out.

Fresh infrastructure is the single biggest lever for getting more replies out of the same copy.

7. Next 90 Days — Proposed Plan

Continue / Scale

- **GEO Readiness** — Refresh with new leads and new infrastructure. This is the backbone.
- **Existing LLMs — Google** — Best reply rate at 3.6%. Reload with a new lead batch as more companies adopt llms.txt.

New Campaigns to Launch

- **Re-engagement campaign** — 2,000+ replies in the system including soft maybes. A targeted re-engagement sequence can generate meetings from an already-warm list.
- **Blog content / thought leadership angle** — “You are creating great content. Here is why ChatGPT is not citing it.”
- **Healthcare + NGO vertical** — Strong response from Pazanga Health, FreeWorld, NAMI. Formalize as a dedicated campaign with offer-specific copy.

What We Are NOT Doing

- Whole-offer multi-angle campaigns — data says they do not work
 - Microsoft as a primary target — keep as small supplemental only
-

8. Summary

In roughly 4 months we have:

- Built and tested **9 distinct outbound campaigns** across multiple signal types
- Contacted **119,769 unique prospects**
- Sent **210,881 emails**
- Generated **2,278 unique replies** and **338 qualified interested responses**
- Proven out signal-based strategies with documented positive replies from real founders and CEOs
- Identified the 2 campaigns worth scaling and the 2 worth cutting

The pipeline is working. The next step is refreshing infrastructure, re-engaging the warm list, and adding 1–2 new campaign angles on top of the proven base.

We are ready to propose a new 90-day scope if PaceGen wants to continue.
