

PaceGen × Otto Results — Strategy Brief

Campaign Performance & 90-Day Renewal Proposal

Prepared: April 28, 2026

Executive Summary

Over the past ~120 days we have built, tested, and scaled **15 outbound campaigns** for PaceGen across 3 offers (GEO/LLM visibility, Revenue Zen, Eastern Standard), contacted **156,870 prospects**, sent **256,479 emails**, generated **2,523 unique replies**, and produced **348 qualified interested responses**.

This document covers what we built, the signal-based strategies we deployed, what is working, what we are cutting, and what the next 90 days look like.

1. Campaign Overview — Full History

Offer 1: PaceGen GEO / LLM Visibility

Campaign	Signal Type	Status	Leads	Emails Sent	Unique Replies	Interested
GEO Readiness	Broad GEO	Active	62,911	115,981	1,216	207
GEO Readiness (Apr 23 — New Leads)	Broad GEO	Active	3,416	5,746	25	—
Existing LLMs — Google	llms.txt Signal	Active	19,209	54,920	685	92
Missing LLMs — Google	llms.txt Signal	Complete	8,977	8,977	59	10
Competitor Gap Attack — Google	Competitor Signal	Complete	9,110	9,111	163	22
Whole-Offer Strategy — Google	Whole Offer	Complete	1,153	1,153	9	—
Missing LLMs — Microsoft	llms.txt Signal	Complete	2,072	2,072	12	—

Competitor Gap Attack — Microsoft	Competitor Signal	Complete	7,329	7,329	67	3
Whole-Offer Strategy — Microsoft	Whole Offer	Complete	5,592	5,592	42	4
Content Investment + Traffic Decline	SEO/LLM Decay	Draft	—	—	—	—
GEO Subtotal			119,769	210,881	2,278	338

Offer 2: Revenue Zen

Campaign	Status	Leads	Emails Sent	Unique Replies	Interested
Revenue Zen — Main Campaign	Paused	2,205	5,759	34	—
RZ — Updated	Paused	16,772	16,772	74	8
Copy of RZ — Updated	Active	4,474	4,474	2	—
RZ Subtotal		23,451	27,005	110	8

Offer 3: Eastern Standard

Campaign	Status	Leads	Emails Sent	Unique Replies	Interested
Eastern Standard — Main Campaign	Paused	5,366	10,309	69	1
ES — Updated	Active	8,284	8,284	66	1
ES Subtotal		13,650	18,593	135	2

Grand Total — All Offers

Leads Contacted	Emails Sent	Unique Replies	Interested
156,870	256,479	2,523	348

2. Signal-Based Strategies We Have Run

One concern raised was that we are doing “spray-and-pray.” That is not accurate. Here is a breakdown of every signal type we have tested and the results:

Signal 1 — llms.txt File Detection (Google + Microsoft)

Campaigns: Existing LLMs — Google, Missing LLMs — Google, Missing LLMs — Microsoft

We scraped companies with or without `llms.txt` files on their domains — a strong technical signal that the company cares about AI visibility. We split into two sub-angles:

- **Existing LLMs:** “You already have an llms.txt — do you know if AI is actually citing you?”
- **Missing LLMs:** “You do not have an llms.txt — here is what you are leaving on the table.”

The Existing LLMs — Google campaign became our **highest unique reply rate campaign at ~3.6%** (685 replies / 19,209 leads).

Example → Roger Rizk, Co-Founder & COO @ BLACKBOX.AI:

“Roger, checked blackbox.ai/llms.txt and saw you already have one on your website. Smart move. Do you know if AI tools are actually citing Blackbox when people ask about ai development platform? We track AI citation rates and can show you exactly where you are showing up (or not). Can I send over a report?”

Roger replied: “please share how you can help in details”

Signal 2 — Competitor Gap Attack (Google + Microsoft)

Campaigns: Competitor Gap Attack — Google, Competitor Gap Attack — Microsoft

We ran prospects’ competitors through ChatGPT and Perplexity and identified where competitors are cited but the prospect is not.

Example → Oleg Zankov, Founder @ Latenode:

“Oleg — ran ‘best ai workflow automation saas’ through ChatGPT. Zapier showed up. Latenode did not. Right now is the easiest time to fix that. Early movers are locking in positions while competitors sleep. We make AI recommend you instead of your competitors. 90 days to full visibility — most see first citations in 30. Want me to send over a competitive breakdown?”

Oleg replied: “Tell me how you do it”

Signal 3 — GEO Readiness Scorecard

Campaigns: GEO Readiness (main + refresh). Highest absolute interested replies: **207**.

Example → Nikhil @ Simpl AI:

"Nikhil, searched on ChatGPT and Simpl AI was not cited. We built a GEO Readiness Scorecard — most companies score 3-5 out of 11, meaning they are invisible to 50%+ of their market. Still interested?"

Nikhil replied: "interesting, yeah can you send over the scorecard. I assume your company does GEO consulting to help companies improve?"

Example → Laura Nobles, CEO @ Pazanga Health Communications:

"Laura, searched for healthcare public relations on ChatGPT and Pazanga Health Communications was not cited. We built a GEO Readiness Scorecard..."

Laura replied: "Hi Rocky — Yes, please send me a scorecard to review."

3. What Is Working

Campaign	Interested	Unique Replies
GEO Readiness	207	1,216
Existing LLMs — Google	92	685
Competitor Gap Attack — Google	22	163
Missing LLMs — Google	10	59
RZ — Updated	8	74
Whole-Offer Strategy — Microsoft	4	42
Competitor Gap Attack — Microsoft	3	67
Eastern Standard — Main Campaign	1	69
ES — Updated	1	66

Key insight: GEO and signal-based LLM campaigns are the clear winners by interested count. Revenue Zen and Eastern Standard are generating replies at solid rates but haven't converted to interested at the same level — likely a copy or offer-fit issue worth addressing next cycle.

4. What Is Not Working / What We Are Cutting

Whole-Offer Strategy — Google: 1,153 leads, only 9 replies, 0 interested. Multi-angle approach dilutes the message. Cutting entirely.

Content Investment + Traffic Decline: Never launched. Shelving — requires a different buyer mindset and longer education sequence.

Microsoft as primary: Consistently underperformed Google equivalents. Keeping as small supplemental only.

RZ and ES reply-to-interested conversion: Both offers generate replies (110 and 135 respectively) but very few interested (8 and 2). The copy is getting attention but the offer framing or follow-up sequence isn't converting curiosity into intent. Recommend a copy and sequence review before the next cycle.

5. Why Volume + Signal Is Not Spray-and-Pray

At the signal volumes available (companies with llms.txt files, companies with specific competitor citations), we can exhaust the cleanest intent signals within a few days. The GEO market is still early and the addressable list of "perfect signal" accounts is not infinite.

The right architecture is two tiers:

- **Tier 1 (pure signal):** llms.txt owners, verified ChatGPT citation gaps → high personalization, lower volume
- **Tier 2 (broad + personalized):** GEO Readiness at scale, personalized to company name + keyword + AI engine → 207 interested per cycle

Both tiers are running. Volume at Tier 2 keeps pipeline full while Tier 1 warms and converts.

6. Infrastructure Recommendation

Current situation: All sending inboxes are under Rocky's name across multiple aging domains. Deliverability degrades as campaigns age.

- **New domain + inbox per offer** — 4 sending identities minimum (GEO, RZ, ES, reserve)
- **Warm new inboxes now** — 4–6 week warmup before high-volume sends
- **Retire aging domains** — `pacegenbrandauthority.info` and `pacegenanswerstrategy.info` should be rotated out

Fresh infrastructure is the single biggest lever for getting more replies out of the same copy.

7. Next 90 Days — Proposed Plan

Continue / Scale

- **GEO Readiness** — Refresh with new leads and new infrastructure. Backbone of the program.
- **Existing LLMs — Google** — Best reply rate (3.6%). Reload with new lead batch.

- **RZ and ES** — Continue with revised sequences focused on converting the high reply volume into more interested responses.

New Campaigns to Launch

- **Re-engagement campaign** — 2,500+ replies in the system. A targeted re-engagement sequence can generate meetings from an already-warm list.
- **Blog content / thought leadership angle** — “You are creating great content. Here is why ChatGPT is not citing it.”
- **Healthcare + NGO vertical** — Strong response from Pazanga Health, FreeWorld, NAMI. Formalize as a dedicated campaign.

What We Are NOT Doing

- Whole-offer multi-angle campaigns — data says they do not work
 - Microsoft as a primary target
-

8. Summary

In roughly 4 months we have:

- Built and tested **15 distinct outbound campaigns** across 3 offers and multiple signal types
- Contacted **156,870 unique prospects**
- Sent **256,479 emails**
- Generated **2,523 unique replies** and **348 qualified interested responses**
- Proven out signal-based strategies with documented positive replies from real founders and CEOs
- Identified the campaigns worth scaling and the ones worth cutting

The pipeline is working across all three offers. Next step: refresh infrastructure, revise RZ and ES sequences to convert more replies into meetings, re-engage the warm list, and add 1–2 new angles on top of the proven base.

We are ready to propose a new 90-day scope if PaceGen wants to continue.
